

Vindex Private Cloud Ai

2026

Secure Ai platform for
organizational processes

TECHNOLOGY

Open-source Ai,
running on your own data,
privately hosted in the Netherlands,
with workflow agents built in.

01 What is Vindex?

Vindex is an Ai platform designed to work primarily on your own organizational data. All the data remains in the Netherlands, inside your private cloud. No black box, no data sent to Big Tech, and no exposure to third-party model training.

Vindex adds an Ai layer on top of your existing systems: ERP, Office, CRM, email, and documents and which operates like a digital colleague embedded in daily work.

Not a one-off automation, but an agent that understands business tasks, executes them, and reports back with clear, traceable results.

02 The goal

We help SMEs mitigate the risks of the US Cloud Act and implement Ai agents in a way that keeps their data safe and under their control.

03 To whom is this relevant?

- Organizations that want Ai without the risk of data loss,
- CFOs and board members who prioritise control, compliance and governance,
- IT managers who don't want a platform migration, but prefer to optimize on top of their existing stack,
- SMEs looking to reduce workload by automating repetitive tasks with reliable, auditable agents,
- Companies aiming for greater efficiency without sacrificing control, data security, or privacy.

04 The result

- Less manual work (administrative tasks, reporting, emails, and recurring decisions are handled automatically).
- Better information access (Vindex finds the documents, data or context you need within seconds).
- A process flow powered by one digital colleague (Ai agents run tasks end-to-end, resulting in structural capacity gains across teams).
- No major transitions or migrations (no system replacements, no big IT projects, no data moves. Vindex runs on top of what already exists).

05 Why now?

Organizations want to adopt Ai, but many get stuck because of the US Cloud Act and the uncertainty that comes with it:

- Where does my data go?
- Is it safe, and are the results traceable?
- How do I retain control?

With the Ai Act and GDPR tightening requirements even further, these questions are becoming urgent.

This is exactly why we designed Vindex the way we did.

06 The essence

- Ai only works when the foundation is right: your own data, securely handled, fully controlled.
- Vindex enables organisations to use Ai without fear of data leaks, without migrations, and without losing control.

Our promise is simple: our Ai data-platform automates **at least 40 hours of work per week** within your organisation, the equivalent of one full-time employee you can redeploy to work that creates more value.

Hosted on
Dutch servers

Conform ISO 27001
and NIS2-ready.

Full control of your
IT landscape
